# LAVANSII CHAWDA

**AI and Computer Vision Engineer & Researcher**

Kalaburagi, Karnataka |+91–9108731057 | lavansichawda11@gmail.com LinkedIn GitHub Portfolio

## Professional Summary

Results-driven Computer Science Engineer (9.15 CGPA) specializing in Computer Vision, DeepFake Detection Domain, and AR/VR. Authored published research on multi-modal feature extraction for image forensics. Recognized by faculty for exceptional presentation and communication skills. Seeking to leverage technical expertise and pedagogical talent in a high-impact R&D.

## Technical Skills

- AI & Machine Learning: Python, Tensorflow, Pytorch, Scikit-learn, Pandas, Matplotlib, Numpy.
- Computer Vision: OpenCV, Mediapipe,Image Classification,Object & Face Detection,VIT.
- Generative AI & AR/VR: Generative Models (GANs), ARCore, Sceneview,3D object interaction.
- Tools & Database: Git, google Colab, google Cloud, Vertex AI, SQL, Hadoop.

## Projects

### AR the learning companion -

- **Built** an Android-based AR learning application using ARCore, Kotlin, Sceneview to improve educational engagement and concept retention.
- **Optimized** real-time 3D rendering of educational models (alphabets, anatomy) on the detected planes, enhancing user visualization.
- **Resolved** 5+ device-specific ARCore compatibility failures through systematic debugging, reducing crash rate by ~30% and ensuring stable deployment across Android API levels 24–33

### Digital Deception Detection -

- **Developed** a hybrid deep learning model using TensorFlow and OpenCV to detect digitally manipulated facial images.
- **Designed** a dual-stream feature extraction pipeline fusing 68-point facial landmark vectors with FFT-based frequency domain maps, directly enabling a 5% accuracy gain and lifting final model performance to 93% on a held-out deepfake test set.
- **Achieved** an 93% detection accuracy on the test dataset (Improved model accuracy by 20% by independently researching and implementing the VGG16 architecture to solve an initial performance issue.)

### Intelligent News Aggregator & Sentiment Analysis Pipeline –

- **Developed** an end-to-end Python data pipeline to aggregate live RSS feeds using Pandas and Feedparser.
- **Trained** and optimized a Scikit-learn multi-class text classifier across 6 tech categories, achieving 88%+ accuracy on a corpus of 1000+ RSS articles using vectorization and grid-search hyperparameter tuning.
- **Engineered** a sentiment scoring feature using NLTK (VADER) to quantify article tone from -1.0 to +1.0.
- **Built** an interactive Streamlit dashboard for real-time data visualization and filtering.

## Education

**B.E in Computer Science and Engineering** 2022 – 2026 | CGPA – 9.15
PDA college of Engineering

**Pre-University**
Gurukul Independent PU college 2020 – 2022 | Percentage – 90%

## Certificates & Professional Development

Generative AI Exchange program | Google Cloud [May 2025]
Data Science Workshop | TechFest IIT Bombay [December 2024]

## Research and Publication

Lavansi Chawda, et.al — "Deepfake Detection For Images using Multi Modal Features" presented in the International Conference on Contemporary Engineering and Technology (ICCET), 2026.
Organized under OSIET, Chennai , India
